Blainville, Quebec - June 30th, 2023

Hitachi Systems Security Inc. Launches New Managed Web Security Services to Provide Enterprises with More Robust Web Server Security

Hitachi Systems Security Inc, a leading provider of information security and compliance services, is proud to announce the launch of two new Managed Web Security Services designed to enhance the protection of enterprise web servers against cyberattacks: Web Vulnerability Monitoring and Web Compromise Monitoring. The day-to-day operations of this new service offering will be managed 24x7 by highly specialized security experts of the Hitachi Systems Security Operation Center.

Many companies encounter significant challenges in web monitoring, including:

- Insufficient measures to effectively protect their enterprise web servers from threat actors.
- Difficulty in identifying and prioritizing vulnerabilities from potential threats.
- Traditional vulnerability assessments, conducted periodically by web administrators, struggle to keep up with daily web server updates and the continuous discovery of new vulnerabilities.
- Detecting compromised web servers poses a challenge, potentially putting customers at risk when visiting websites unknowingly.

To address these challenges, Hitachi Systems Security has developed two services designed to provide practical solutions: **Web Vulnerability Monitoring** and **Web Compromise Monitoring**.

They aim to help organizations overcome issues such as insufficient protection for enterprise web servers, difficulty in identifying and prioritizing vulnerabilities, and the challenge of detecting compromised servers.

PRESS RELEASE

For immediate release

Web Vulnerability Monitoring Service

- Hitachi Systems Security Inc. provides a focused and time-sensitive report on "Web Vulnerability Monitoring," which automatically performs continuous monitoring against top vulnerabilities. This service ensures web servers are up to date with the latest software updates and protected against critical vulnerabilities.
- If critical vulnerabilities are discovered, Hitachi Systems Security experts will promptly notify system administrators, providing comprehensive details.

Web Compromise Monitoring

- Proactive security measures such as vulnerability management are essential, monitoring websites for unauthorized changes is equally crucial. The "Web Compromise Monitoring" service offered by Hitachi Systems Security diligently monitors web server content for signs of malicious code injections, web content defacements, and unauthorized alterations.
- Suspicious activity is analyzed, and system administrators are promptly notified with comprehensive details of any detected attacks.

"In today's digital landscape, enterprises heavily rely on the web for their critical business operations. Recognizing the mission-critical nature of web-based services, we are thrilled to announce the launch of our new Web Security Services. With these cutting-edge solutions, we aim to enhance the protection of our valued customers, safeguarding their web infrastructure from potential threats and ensuring uninterrupted business operations," said Anthony Subero, CEO of Hitachi Systems Security.

As part of Hitachi Systems Security's comprehensive Web Security Services, the primary scanning objectives encompass the following:

1. Maintaining enterprise awareness of publicly accessible web-based assets to ensure a comprehensive understanding of the organization's online presence and potential vulnerabilities.

2. Providing valuable insight into how systems and infrastructure may appear to potential attackers enables businesses to make informed decisions and fortify their defenses against threats.

3. Driving proactive mitigation of vulnerabilities to help minimize overall risk by identifying and prioritizing vulnerabilities promptly, allowing for proactive measures to be implemented to reduce the organization's security exposure.

As a trusted security partner, Hitachi Systems Security provides enterprises with robust and timely protection for web servers and a comprehensive approach to web monitoring, allowing businesses to proactively identify vulnerabilities, address threats, and protect their online presence.

By addressing challenges in web monitoring, prioritizing vulnerabilities, and detecting compromised servers, Hitachi Systems Security enables businesses to maintain their web presence's integrity and ensure uninterrupted operations in today's evolving threat landscape.
